

Purpose to compare the OMP profile for a # of strains of *B. cereus*.

blots were prepared as per Murphy + Lock.

On at 1-25-72, no matter what OMP and biological to obtain the spot and supernatant (10,000 x 5) beads.

While minor protein may be unique, but not resolved, 2 unique major protein are seen and in both 49143 + 25238 (both of which agglutinate human R.B.C.)
